

CSC209H Worksheet: malloc Basics

1. Each time a variable is declared or memory is otherwise allocated, it is important to understand how much memory is allocated, where it will be allocated and when it will be de-allocated. Complete the table below. (Note: some of the programs allocate more than one block of memory.)

Code Fragment	Space?	Where?	De-allocated when?
<pre>int main() { int i; }</pre>	sizeof(int)	stack frame for main	when program ends
<pre>int fun() { float i; } int main() { fun(); }</pre>	sizeof(float)	stack frame for fun	when fun returns
<pre>int fun(char i) { ... } int main() { fun('a'); }</pre>	sizeof(char)	stack frame for fun	when fun returns
<pre>int main() { char i[10] = {'h','i'}; }</pre>	sizeof(char) * 10	stack frame for main	when program ends
<pre>int main() { char *i; }</pre>	sizeof(char *)	main	program ends
<pre>int main() { int *i; }</pre>	sizeof(int *)	main	program ends
<pre>int fun(int *i) { ... } int main() { int i[5] = {4,5,2,5,1}; fun(i); }</pre>	sizeof(int *) ← sizeof(int) * 5	fun ← main	fun returns program ends
<pre>int main() { int *i; i = malloc(sizeof(int)); }</pre>	sizeof(int *) ← sizeof(int)	main ← heap	program ends program ends
<pre>void fun(int **i) { *i = malloc(sizeof(int)*7); } int main() { int *i; fun(&i); free(i); }</pre>	sizeof(int **) ← sizeof(int) * 7 ← sizeof(int *)	fun ← heap ← main	fun return when f(i) terminates. program ends

CSC209H Worksheet: malloc Basics

2. Trace the memory usage for the program below up to the point when `initialize` is about to return. We have set up both stack frames for you, and the location of the heap.

```
#include <stdio.h>
#include <stdlib.h>

// Initialize two parallel lists.
void initialize(int *a1, int *a2, int n) {
    for (int i = 0; i < n; i++) {
        a1[i] = i;
        a2[i] = i;
    }
}

int main() {
    int numbers1[3];
    int *numbers2 = malloc(sizeof(int) * 3);

    initialize(numbers1, numbers2, 3);
    // ←
    for (int i = 0; i < 3; i++) {
        printf("%d %d\n",
            numbers1[i], numbers2[i]);
    }

    free(numbers2);
    return 0;
}
```

Section	Address	Value	Label
Heap	0x23c	0	
	0x240	1	
	0x244	2	
	0x248		
	⋮	⋮	
stack frame for initialize	0x454	0x474	a1
	0x458		
	0x45c	0x480	a2
	0x460		
	0x464	3	n
	0x46c	0 1 2 3	i
	0x470		
stack frame for main	0x474	0	numbers1[0]
	0x478	1	
	0x47c	2	
	0x480		
	0x484	0x23c	number2
	0x488		
	0x48c
